Experience

Stripe • Software Engineer Managed Payments

New York, NY
11/01/2024 - Present

- Collaborated across 15+ teams at Stripe to develop Managed Payments as a founding engineer.
- Implemented the money-movement flows in Stripe's internal ledgering system to support the unique legal requirements for Stripe to act as a merchant-of-record and manage global tax and fraud prevention on behalf of our users.
- Developed a guided flow for new users which eliminated onboarding-related support tickets and improved go-live rates.
- Onboarded 4 new-hires and mentored junior engineers through one-on-ones and spin-up projects.

Revenue and Financial Automation: Data Connectors

08/08/2022 - 11/01/2024

- Led the Alpha launch of the Data Connector for Google Play Store by writing the technical design, implementing it with the help of one engineer, onboarding our first user, and managing product, legal, security, and design stakeholders.
- Implemented a Data Connector for users to upload large files (up to 5GB) on the Stripe Dashboard for our Tax, Billing, and Revenue Reporting products. Previously, users could only upload 30MB files.
- Developed an API for users to programmatically import their financial data so Stripe functions as their source of truth.

Amazon • Software Development Engineer Intern Devices: Alexa Weather

Sunnyvale, CA
06/14/2021 - 09/03/2021

- Developed a tool in Java with AWS CDK and Lambda to automate the investigation for customer-reported issues, reducing fact-finding from an hour to a few seconds. Ensured security by integrating Amazon's Enterprise Access-only Authorization.
- Helped onboard a new-hire with knowledge-sharing sessions about legacy parts of the system my tool modified.

Esri • Software Engineering Intern ArcGIS Pro: Raster & Imagery

Sharjah, UAE
07/03/2017 - 08/03/2017

- Created drivers in C++ to provide support for new file formats in ArcGIS. Wrote user-facing documentation for these drivers.
- Used GDAL to write an automated testing script to test support for different image file types and systematically log the results.

Projects

Budget.rip • Personal Project

2023 - Present

- Integrated with Stripe Financial Connections, Venmo, and Splitwise API to develop a personal budgeting app that imports transactions automatically via any payment method, groups them by events, and tracks spending across various categories.
- Leveraged Claude Code to improve latency and perform migrations like MongoDB to Postgres and Create React App to Vite.
- Tools: React, Flask, Postgres, and CI/CD with Github Actions

Books For A Cause • Founder at GEMS Modern Academy

2018

- Created a website which enables students at GEMS Modern Academy to trade used textbooks. Spearheaded a marketing campaign which led to 450+ users signing up within the first 2 months. Trained 4 students to maintain and update the website.
- Tools: HTML, CSS, JavaScript, PHP, and MySQL.

Education

University of California Los Angeles • B.S. Computer Science

2018 - 2022

Skills

Languages: Java, Python, Ruby, JavaScript, SQL

Frameworks & Technologies: React, Flask, MongoDB, Postgres, AWS
